TO WHOM IT MAY CONCERN

This letter is an application for **Senior Software Engineer** position.

I am a Sr. Software Engineer, with experience working with some of Canada's most well-known brands, such as Aeroplan, Air Miles, and Toyota. My work is modern (react, next.js, typescript, ORMs, etc), compliant (AODA / WCAG 2.0 AA, responsive), and scalable (Microservices, Serverless & Cloud deployments).

In the last 6 years, I've made the journey from junior to senior, team lead, SME, coaching, and hiring manager roles. I went from attending meetups to speaking at them and proposing major engagements with clients. I know what it is like to start from scratch, but also, how to execute with a team. Thus, I do my best to support team growth with not just code quality, but with project management, authentic peer support (coaching, mentorship, and documentation), and a wide range of experience (Full Stack, DevOps, UI Design).

In addition, I come from an interdisciplinary client-facing background in Interior Design. I love the intersection between function and user experience and I believe I offer a unique engineer + designer + consultative perspective that is missing in the industry.

I hope that by reading my resume, you'll find I am highly motivated, open to learning, and a good fit for your company's growth and culture. If so, let's chat, I'm always open to new connections!

Best,

Tony Ko

P.S. Check out my recommendations!

KEY PROJECTS

PayPower Prepaid MasterCard - Mobile Banking App - Team of 2

[Apple App Store and Google Play Store](#)

- Led research and development into refactor for white-labelling: Yarn Workspaces + Turborepo + React Native + Create React App.
- Led development of web component styling & mobile build pipelines (Android & iOS).
- Worked with client product team on developing agile processes.

Key Skills: Turborepo + React Native compatibility, mobile build pipelines, currency handling.

Aeroplan eStore – Points Redemption Store - Team of 15~

<https://aeroplan.rewardops.com>

- Led system design: bilingual Rush Monorepo React + Express, Redux and Material UI.
- Led team of 5 juniors on WCAG 2.0 AA compliance / implementation
- Built core features such as Air Canada API logic, Redux structure, localization & search.
- Worked with currency & checkout (Big Integer, Bambora, Nonces), and item variant indexing .
- Performed code reviews with a focus on maintainability & conventional comments.
- Wrote Integration and Unit tests with React Testing Library

Key skills: Redis caching, OAuth sessions, Caching, Redux, currency handling and JSS patterns.

Aeroplan Shopping Button – Browser Extension - Team of 2

[Chrome, Firefox, Edge and Safari Extension Stores](#)

- Led system design: bilingual Rush Monorepo React + Express, SWR, cross browser support.
- Developed WCAG 2.0 AA front end & webpack bundling for web & service workers.
- Developed Material UI components and built hooks on extension data flow: server to worker to client fetching.
- Worked with PO to establish agile Epics and Sprints & manage client requirements.
- Work directly with DevOps to implement scaling, security, release pipelines and deploys.

Key skills: PWA Service Workers, DOM content injection, CSP and CORS policy, SWR / Query fetch

Air Miles – Landing Page - Team of 50~

<https://airmiles.ca>

- Front end development in a react component Lerna monorepo + Adobe AEM (java) backend.
- Use SASS & BEM CSS standard to create styles compatible across a 100's of components.
- Work with PO & Team to estimate and implement feature requirements.

Key Skills: Monorepo component library, BEM CSS

EDUCATION

CSE – Full Stack Development – 2016 - 2017

FreeCodeCamp – Remote

CSS / JS, Libraries, Rest API, Algorithms

B.Des – Environmental Design – 2013 - 2016

OCAD University – Toronto, Canada - 3 of 4 years

Interior, Architectural and Civil Design
