TO WHOM IT MAY CONCERN

This letter is an **application** for a **Front End Developer** position at **Havas**.

I am a Full Stack developer based in Toronto, with practical experience in the following:

- **Frontend:** Vue.js, React, CSS & Parallax Animation, Responsive / Mobile SASS, Accessibility, Localization.
- **Backend:** Rest API, Node.js, Gulp.js, Webpack, Koa/Express.js, PHP, Python.
- **Database:** MySQL DB, flat JSON db, Web Scraping.
- **SEO:** Google Analytics & Tag Manager, Bing Analytics.
- **Platforms:** Shopify, Wordpress, MS Dynamics CRM, Pantheon
- **Sysops:** Docker, Continuous Integration & Deployment (CI/CD).
- **General:** JS ES6, Functional Programming, AWS, Bash, Git

As well as **an eye for design** from my time at OCAD and in my previous career in Interior Design.

- **Image Production:** Sketch, Draw.io, Photoshop, Illustrator, Indesign
- **Design concepts:** Color Theory, Basic UX & UI, Web Graphics.

I'm familiar with what it takes to create great full stack applications on a tight schedule. Having said that, I do have a desire to grow my React and Unit Testing skills, particularly in a startup or agency environment.

Hopefully, my **technical skills**, along with my **attached resume and recommendation**, fits the position at **Havas** for a competent, adaptive and passionate **Front End Developer**. If so, feel free to contact me, I would be very happy to discuss further.

Best,

Tony Ko
